- of DIA.
- The following points of interest have been extracted from the report:
  - a) DIA believes that the Moscow Economic Conference which preceded the Fair was good preparation for the Fair. The theory of the necessity of onlarging trade relations between countries of differing economic and political structures was out into practice at Leibzig.
  - b) Quality of goods exhibited was excellent. East German goods can either meet world market price competition now or prices of goods made in East can be lowered without difficulty to meet the competition.
  - c) Office equipment (Eueromaschinen) of excellent quality is a particular example; its price is two high above that of the international market. East German typewriters of excellent quality can hardly be sold abread because the world market is flooded with cheap machines. American rearmament policy is to be held responsible for this situation; the Americans are establishing typewriter factories with high production capacities within and outside of Europe. They are doing this, despite the crowded world market, because such a plant can be converted to arrament production within 48 hours. The Remington Rand branch in Paris makes 50,000 machines annually; the same firm has other factories in England, Holland, Norway and Italy. When one realizes that General MacArthur is one president (sic) of the Remington firm, the connection between the American-fleeded world market and the United States armament industry becomes quite clear,
  - d) At the Fair, Arabian keyboard typewriters were in particular demand. East Germany has placed the Optima machine on the Arabian market. Direct relations were also established with Indonesian importers; 2,000 machines are to be delivered by the end of 1952,

- e) Sepresentatives and buyers from the following countries and areas showed interest in East German products on exhibit: France, Balgium, the Netheraland, Denmark, Sweden, Norway, Finland, Italy, Switzerland, England, Saypt, the Sudan, Lebemon, Morocce, Yemen, Indonesia, Chile, Peru, Colombia, Hong Kong, Malaya, Siam, Buyma, New Mealand, Greece, and Meat Germany.
- 1) Hast German cameras are of the highest quality and can easily stand world competition. Highly rement of Thagee production in 1953 has already been sold; seventy to minety percent of the 1953 Niedersedlitz, capacity is also committed. The United States is Hast Germany's chief camera nustomer since other countries lack the purchasing power necessary for such luxury articles. Fifty percent of 1953 Contax production has been committed to the United States.
- g) Optical instruments and precision measuring devices, mainly those exhibited by Zeiss Jena, attracted much attention. Medical instruments were also the subject of considerable interest. Prices of some, however, are too high to compete with Yest German products. Sharp competition is being affected by the Wild firm in Switzerland and by West German concerns.
- h) Dzechoslovakia was the only customer for Taboratory and testing equipment in quantity. This situation arises because West Corman firms sell bigg quality and chear equipment to the mestern nations.
- i) Only a small sumber of western companies exhibited precision mechanical and votical products at merpaig. The Federal Republic was represented by live firms, West Berlin by none. A few Swiss and French businesses exhibited their products which were mostly watches.
- j) At the Fair negotiations were initiated with Russia for the purchase of a quartz glass speciograph, type KC55, to be used at the Freiburg Mining Academy.
- k) Fransactions concluded at Leipzig with representatives from all parts of the world far exceeded East German expectations in contrast to the 1952 Fair, when sales fell short of expectations.
